

2026 Price Utah Day 2
Written Statement

Thank you for responding to our mine emergency.

You are located at the Fresh Air Base established in the 8
Right Section.

The 8 Right entries are numbered from left to right 1, 2 and 3. Fresh air is coming into the FAB from 1 entry and returns out 3 entry. # 2 entry is caved off. There is a open ventilation shaft in 3 entry of this section which should be on all maps.

A Command Center has been established on the surface.

Last night at the beginning of the hoot owl shift, 3 miners were sent to do maintenance work in the section. The fireboss went to the section about mid-shift to do a weekly return exam but could not get into the section because of hazardous gas. None of the miners in the section will answer phones or radios. None of them came out at shift change. Crews established this FAB this morning while you were in route.

The BLOWING mine fan on the surface is running, is guarded and cannot be reversed or turned off. All power into the mine is locked out.

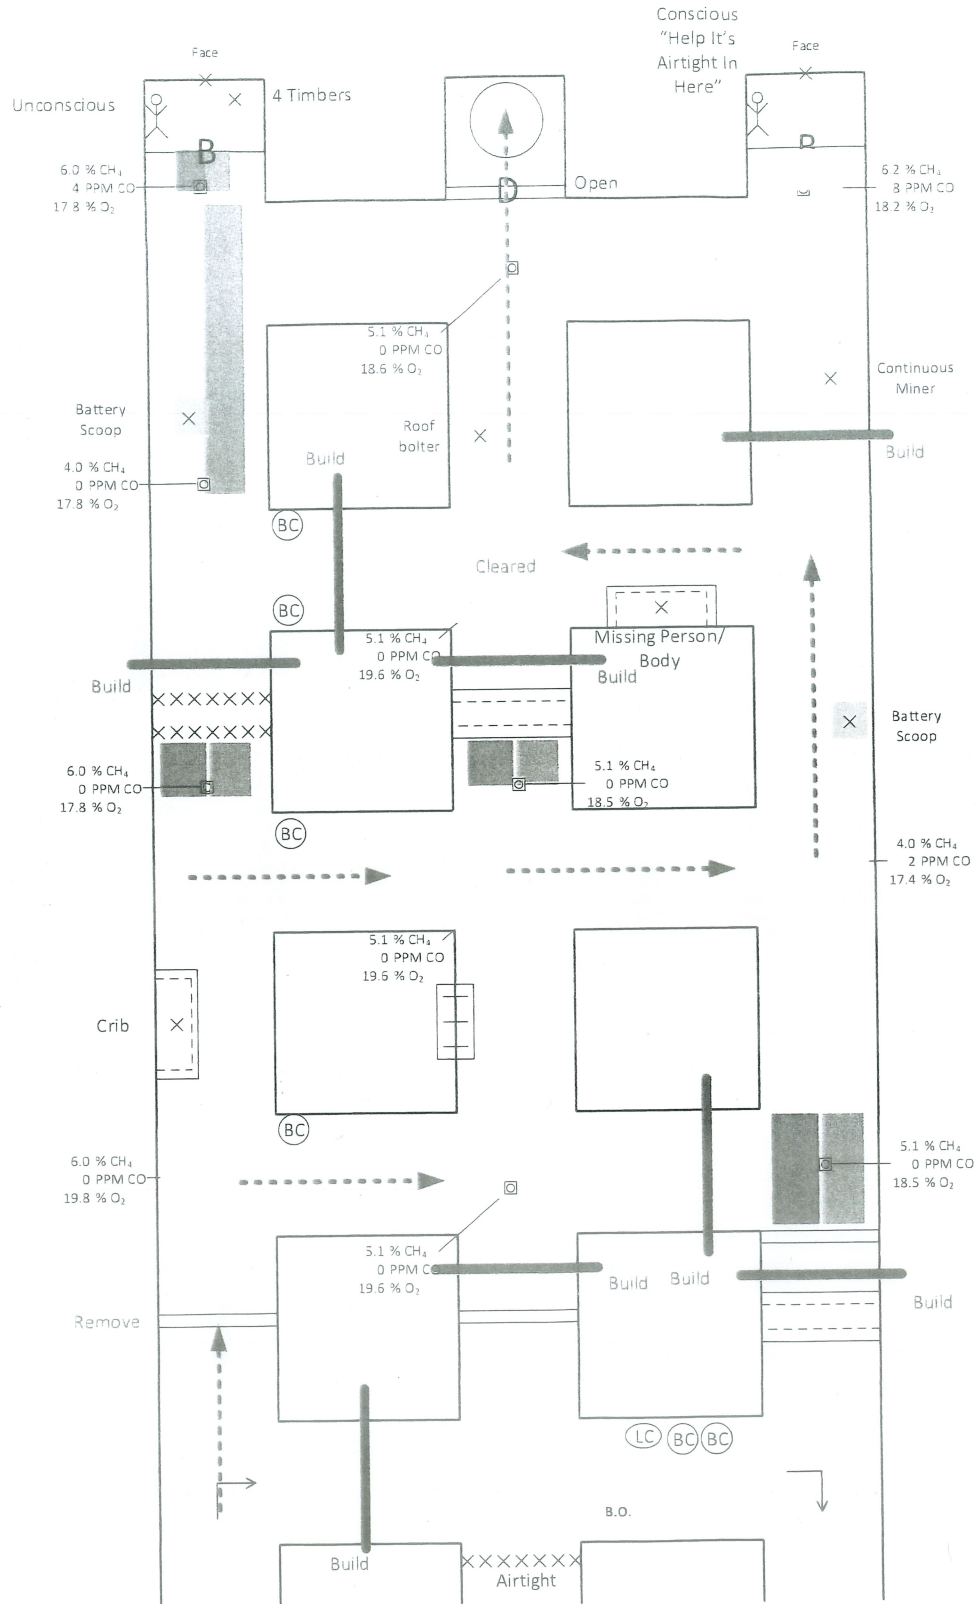

If power is required to energize any electric equipment in the mine, switches will be available at the FAB.

Our mine has a history of methane, Black Damp, water and roof issues.

The mine uses some battery powered haulage equipment.

All officials and backup teams are present.

The mine map we have for your use is up to date.

Vent 4
