¹ The Problem Area Description (PAD) is specific information required to establish a Problem Area in the e-AMLIS inventory.

² The cost estimates from e-AMLIS represent approximations of the costs to reclaim and remediate AML features within the PAD. e-AMLIS cost estimates only reflect construction costs; they do not include other necessary costs such as planning, design, permitting, and construction oversight. Actual total costs to reclaim and remediate the AML features in the PADs identified in the table may vary significantly from the cost estimates provided in e-AMLIS and the table.

¹ The information provided in the table is only a projection of the work that may be done and is provided for informational purposes. Flexibility in planning AML reclamation activities is needed for States and Tribes to incorporate input received from the public, respond to changes in circumstances that require priorities to be adjusted, and address AML emergencies. States and Tribes may conduct AML reclamation activities in areas not identified in the table, which will

not be regarded as a change requiring a grant amendment. Annual and closeout reports will provide actual project status each year.

² States and Tribes may advertise or solicit public input on the list in advance of submitting a BIL application.

³The Problem Area Description (PAD) is specific information required to establish a Problem Area in the e-AMLIS inventory.

⁴ The cost estimates from e-AMLIS represent approximations of the costs to reclaim and remediate AML features within the PAD. e-AMLIS cost estimates only reflect construction costs; they do not include other necessary costs such as planning, design, permitting, and construction oversight. Actual total costs to reclaim and remediate the AML features in the PADs identified in the table may vary significantly from the cost estimates provided in e-AMLIS and the table.
